Interactive Data Visualizations for the Web Chapter 5

Data — structured info w/potential for meaning

Bound — in D3, data must be bound to elements in order to render

`.data(dataset)` -- sets the dataset for a selected container
`.enter()` -- adds data to the container
`.text((data) => {})` -- sets the text for each element
`.style(name, value)`, `.style(name, (data) => {})` -- sets style for each element in a dataset for the function version, return the value from the function)
